Tugas Praktikum UDP 2

Menambahkan alpine 4 dan alpine 5 dan di setting dhcpnya.

Ubah masing masing port dari server

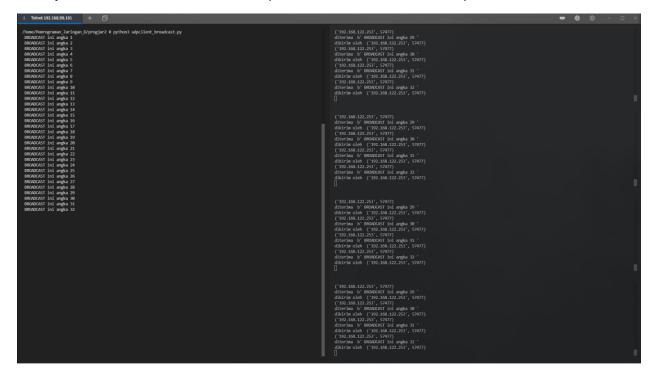

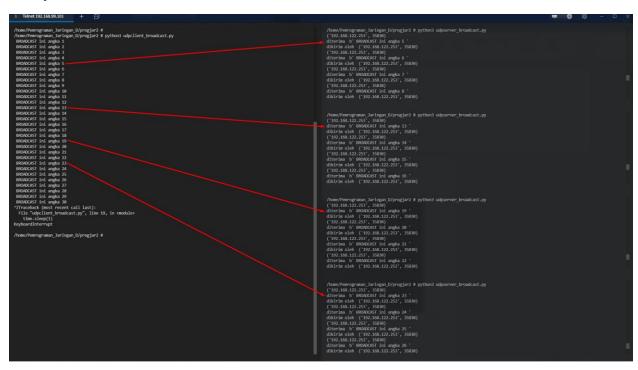

Ubah alamat broadcast di client

```
×
                                               alpine-1
 < alpine-4
                                                        ×
                         alpine-5
  GNU nano 4.6
                               udpclient broadcast.py
                                                                        Modified
import socket
import time
TARGET IP = '192.168.122.255'
TARGET PORT = 5009
sock = socket.socket(socket.AF_INET, socket.SOCK_DGRAM)
sock.setsockopt(socket.SOL SOCKET,socket.SO REUSEPORT, 1)
sock.setsockopt(socket.SOL SOCKET,socket.SO BROADCAST, 1)
angka = 0
while True:
    angka = angka+1
    msg = " BROADCAST ini angka {} " . format(angka)
    print(msg)
    sock.sendto(msg.encode(), ("255.255.255.255", TARGET PORT))
     time.sleep(1)
  Get Help
                Write Out ^W Where Is
                                           Cut Text
                                                        Justify
                                                                     Cur Pos
             ^R Read File ^\
  Exit
                             Replace
                                           Paste Text^T
                                                        To Spell
                                                                      Go To Line
```

Jika di jalankan server terlebih dahulu di alpine 2, 3, 4, dan 5 lalu client di alpine 1

Jika dijalankan dari client terlebih dahulu

Client akan tetap mengirim paket meski server belum di jalankan, dan tidak ada pesan gagal jika paket tidak sampai pada server. Saat server di jalankan, server langsung menerima paket yang saat itu sedang di kirim oleh client.
